

5<sup>th</sup> June, 2018:

- Cells checked under the microscope (Zeiss, SG lab).
  - ↳ No visible signs ~~to~~ of contamination
  - ↳ Cells ~~have~~ show healthy growth (~70% confluency).
  - ↳ Since freshly revived cells are usually allowed 48h time before passaging, splitting cells has been pushed to tomorrow.
- Plan for tomorrow:
  - ↳ Next passaging of confluent cells
  - ↳ Preparation of P6 frozen stocks for future use.
